

Smart Student Assistant – Python Mini Project Report

1. Project Title

Smart Student Assistant

2. Objective

Develop a Python-based Smart Student Assistant that provides study tips, motivational quotes, and the current date and time while storing results in a text file.

3. Project Description

The application asks the user for their name, displays a personalized greeting, and provides menu options to generate study tips, motivational quotes, and display the current date and time. Outputs are saved to output.txt and data is stored in tips.json.

4. Features

User greeting, study tips, motivation quotes, current date and time, file storage, and JSON-based data management.

5. Technologies Used

Python 3, JSON Module, Datetime Module, File Handling.

6. Project Files

main.py, tips.json, output.txt

7. Conclusion

This project demonstrates Python programming concepts such as user input, menu-driven design, file handling, JSON usage, and date-time operations.
